## **For Your Safety**

---

It is solely the responsibility of the system designer and user to select products suitable for their specific application requirements and to ensure proper installation, operation, and maintenance of these products. When selecting products, the total system design must be considered to ensure safe, trouble-free performance. Material compatibility, product ratings and application details should be considered in the selection. Improper selection or use of products described herein can cause personal injury or property damage.

Contact your authorized HOKE® sales and service representative for information about additional sizes and special alloys.

## **SAFETY WARNING:**

---

HOKE® products are designed for installation only by professional suitably qualified licensed system installers experienced in the applications and environments for which the products are intended. These products are intended for integration into a system. Where these products are to be used with flammable or hazardous media, precautions must be taken by the system designer and installer to ensure the safety of persons and property. Flammable or hazardous media pose risks associated with fire or explosion, as well as burning, poisoning or other injury or death to persons and/or destruction of property. The system designer and installer must provide for the capture and control of such substances from any vents in the product(s). The system installer must not permit any leakage or uncontrolled escape of hazardous or flammable substances. The system operator must be trained to follow appropriate precautions and must inspect and maintain the system and its components including the product(s) and at regular intervals in accordance with timescales recommended by the supplier to prevent unacceptable wear or failure.

### 9 Decades of Product Excellence

Samuel W. HOKE began manufacturing small gas flow control valves for jewelers' torches in 1925. At the same time, he also laid the foundation for a top international fluid control products company, HOKE® Incorporated.

In the early 1940's, S.W. HOKE produced the forerunners of today's HOKE® valves, masterfully crafted with the highest quality materials.

In the early 1960's, HOKE® Incorporated (HOKE®) took the industry by storm, introducing the GYROLOK® Tube Fitting. To this day, no other manufacturer has been able to improve upon its unique design.

Over the years, HOKE® built a first-class reputation for designing and manufacturing state-of-the-art products. In striving for maximum quality and value, HOKE® set the industry standards for product safety, operability, durability and reliability.

CRANE continues this product excellence for all global customers.

### Training and Engineering Support

CRANE offers extensive training designed to ensure that your craftspeople thoroughly understand how a GYROLOK® fitting functions. By teaching proper tubing preparation and installation procedures, maximum performance is assured.

CRANE will take the time to assist our customers in finding the GYROLOK® fitting that is right for their specific needs. Ask your HOKE® distributor for details regarding HOKE's valve and fitting installation workshop and additional support materials.

# GYROLOK® Features & Benefits

FEATURES	EXPLANATION	BENEFITS
<b>1. CONTROLLED FERRULE DRIVE</b>	Roll-in locking action of rear ferrule: During fitting makeup, 15° angles close — between the rear ferrule and nut, and between the rear ferrule and front ferrule — thus preventing overstressing of tubing or excessively reducing tubing inside diameter. Front ferrule shoulder: Front ferrule shoulder prevents body expansion and nut jamming, caused by over-tightening.	Provides maximum user safety under high pressure/vibration conditions. Prevents overstressing, which causes tubing failure and possible injury. System efficiency is improved by maximizing flow. Provides unmatched remake life. Maximizes value and economy.
<b>2. BUTT SEAL</b>	Provides a secondary seal and eliminates dead space.	Maximizes fitting leak integrity and user safety. Can seal with scratched tubing. Increases accuracy in sampling applications. Reduces pump-down time in vacuum applications.
<b>3. HOKE® VALVES WITH INTEGRAL GYROLOK® END FITTINGS</b>	Controlled ferrule drive prevents end connection expansion, thus prolonging valve life and eliminating the need to use female-ended valves with separate fittings. Eliminates a possible leak path and extends valve life.	Long product life and maximum value. Safety and economy.
<b>4. GYROLOK® SAFETY CHANGER NUT AND FERRULE SETS</b>	Nut and ferrule sets supplied on rods, already correctly oriented. (Not necessary to handle ferrules when replacing components.)	Safest, simplest device for component replacement.
<b>5. GMT</b>	Marks tubing to show that tubing has been properly inserted into fitting, and that fitting has been properly tightened.	Maximum safety resulting from ability to verify correct tube insertion and proper tightening.
<b>6. SIZING ANGLE</b>	Slight taper in the base of the tube socket reduces possibility of tube sticking	Less tube sticking during disassembly saves time and money
<b>7. SILVER-PLATED NUT THREADS</b>	Silver-plating extends fitting life by preventing galling, up to 1200° F.	Extended product life at extreme temperatures.
<b>8. MATERIAL TRACEABILITY ON FITTING BODY AND NUT</b>	Bodies and nuts made of 316 Stainless Steel and MONEL® are heat code traceable to Certified Material Test Reports.	Traceability provides added safety. Certified Material Test Reports are available for review and verification.
<b>9. PFA FERRULE COATING</b>	Front ferrules—Sizes larger than 1" (25mm) are PFA coated.	Increased resistance to media and atmospheric corrosion.
<b>10. SPECIAL HIGH TOLERANCE NPT THREAD</b>	ANSI Standard B1.20.1 - Basic + 1/4 to Basic +1.	Provides a Safer more robust connection: 63% tighter tolerance with up to six thread engagement, reduced galling and vibration

## The GYROLOK® Design

GYROLOK® Tube Fittings have been carefully designed and manufactured to provide outstanding leak-tight integrity in a wide range of applications.

### Materials

GYROLOK® fittings are available in:

Brass:	BR
304 Stainless Steel:	304/304L
316 Stainless Steel:	316/316L
MONEL®:	M
HASTELLOY® C-276:	HC
Duplex 2205:	DX3
INCONEL® Alloy:	625
INCONEL® Alloy:	825
Super Duplex 2507:	D50
Titanium:	TI
254 SMO:	6MO
316/316L SS Forgings:	ASTM A-182/SA182
304/304L SS Forgings:	ASTM A-182/SA182
Brass Bar Stock, Alloy 360:	ASTM B-16
316/316L SS Bar Stock:	ASTM A-479/SA479
304/304L SS Bar Stock:	ASTM A-479/SA479
MONEL® Forgings, Alloy 400:	QQ-N-281
Brass Forgings, Alloy 377:	QQ-B-626/ASTM B-283
MONEL® Bar Stock, Alloy 405:	QQ-N-281
Brass Bar Stock, Alloy 353:	ASTM B-453

Contact your local HOKE® distributor for further information.

### Certified Material Text Reports (CMTRs)

Bodies and nuts of GYROLOK® fittings in all materials other than Brass are heat code traceable. To obtain CMTRs for these components, place separate orders for such items and specify "CMTRs required on all items".

### Pressure Rating

GYROLOK® fitting ends are rated for working pressures higher than the tubing recommended for use with GYROLOK®. Under no circumstances should tubing be utilized at pressures above its maximum allowable working pressure. Refer to the HOKE® Tubing Data Charts for specific information. If no pressure is identified for a given tube size and tube wall thickness, that tubing is not considered suitable for use with GYROLOK® tube fittings. Pressure ratings may vary for the other fitting end if it is not GYROLOK® (i.e. NPT or O-Ring Seal). For general working pressure ratings for NPT fittings ends, refer to the HOKE® Pipe Fittings catalog. The user must determine whether both the GYROLOK® side and the non-GYROLOK® side working pressure ratings are suitable with the system pressure. For more information on GYROLOK® pressure ratings, contact your local distributor, or HOKE® directly.

### PFA Coating

Stainless steel front ferrules larger than 1" and 25 mm are PFA coated.

### Vacuum Rating

GYROLOK® offers deep vacuum capability. With good quality tubing, GYROLOK® fittings will be leak-tight at vacuum levels of  $10^{-6}$  torr while tested with a leakage sensitivity of  $10^{-9}$  scc

### Temperature

GYROLOK® fittings provide safe, reliable performance from cryogenic temperatures to high temperature bake out levels, depending on material.

316 Stainless Steel: -325° F to +800° F  
(-200° C to +426° C)\*

Stainless steel front ferrules larger than 1" and 25mm are PFA coated. Applications above 450° F (232° C) require silver-plated front ferrules and uncoated rear ferrules. To order extended temperature fittings, add **-HT** to the basic part number.

Brass (copper tubing): -325° F to +400° F  
(-200° C to +203° C)

MONEL®: -325° F to +800° F  
(-200° C to +426° C)

### \* CAUTION: (for Stainless Steel):

Intermittent use to 1200° F (649° C) is possible, however prolonged exposure to temperatures over 800° F (426° C) is not recommended.

## Identifying Metric GYROLOK® Products

**Metric GYROLOK® products have certain features which allow you to identify them from fractional products.**

### A. Step Machined on Body Hex

Straight bodies with a metric GYROLOK® end have a step on the tube fitting side of the hex.

### B. Short Shank on Nut

Metric nuts have a short shank on the threaded end.

### C. Groove in Front Ferrule

Metric front ferrules of brass or 316 stainless steel have a groove in the shoulder. For other materials, see D.

### D. MM Marking

The metric designation "MM" is stamped on:

- metric nuts and straight bodies—after the GYROLOK® trademark
- metric elbows, tees and crosses—on the side opposite the HOKE® logo
- front ferrules made from materials other than brass or 316 stainless steel—after material identification.

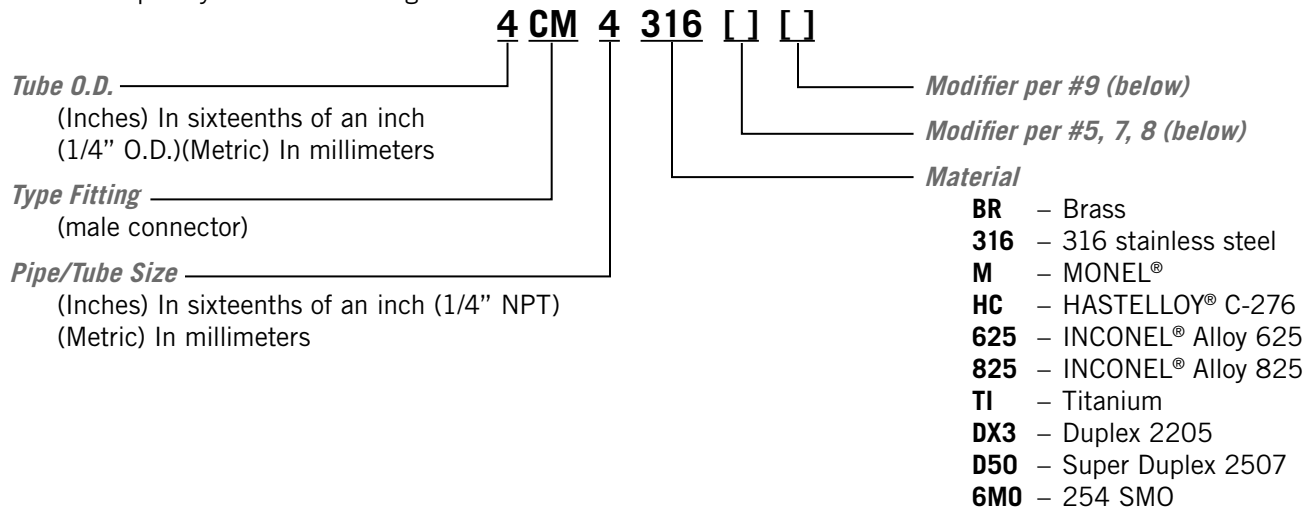

### E. Color Coding

Blue boxes designate metric parts and accessories, including Safety Changer packaging.

# General Information

## How to Order

The GYROLOK® numbering system is a completely descriptive system that's easy to understand. Each part number describes completely assembled fittings.

- The first number (4) identifies the tube O.D. size. For example, **4** = 4/16" for fractional fittings. **4** = 4mm for metric fittings. If there is no 5<sup>th</sup> group, sizes are fractional.
- The letter group, (CM) identifies the type of fitting (Male Connector). See fitting locator, pages 2 and 3.
- The third group, a number (4), is only necessary if the second tube connection size is different from the first tube O.D. size. For pipe sizes, a number is always required.
- Material is identified in the fourth group.
- With the exception of branch tees, the fifth group, if present, contains two letter codes. The first letter designates the unit of measure for the first number in the part number—i.e, **E** for fractional, **M** for metric. The second letter indicates the unit of measure (E or M), or thread type, for the second number in the part number. If there is no 5<sup>th</sup> group, all sizes are fractional.

Examples:

**4CM4 316** = 1/4 tube x 1/4 NPT male connector, 316 stainless steel

**6RU3 BR ME** = 6mm tube x 3/16 tube reducing union, brass

**8LM4 316 EC** = 1/2 tube x 1/4 male RT, male elbow, 316 stainless steel

### Unit of measure/end connector codes:

<b>A</b> = RS male ends	<b>M</b> = Metric tube, in millimeters
<b>B</b> = RP male ends	<b>X</b> = RS/RP female ends
<b>C</b> = RT ends	<b>Z</b> = RG female ends
<b>E</b> = fractional unit of measure in 1/16 <sup>th</sup> of an inch	

- Tee part numbering: TEES are described by first the run (1 and 2) and next the branch (3), for example:
  - TTM** describes a tee that has tube connections at 1 and 2 and a male pipe thread at position 3.
  - TFT** describes a tee that has tube connections at 1 and 3 and a female pipe thread at position 2.

- Fittings cleaned for oxygen service: To order, add **HPS18** to the end of basic fitting part number.

Example: **4CM4316HPS18**

- Fittings cleaned for nuclear service: To order, add **HPS90** to the end of basic fitting part number.

Example: **4CM4316HPS90**

- O-ring designator - Viton® (45) is standard for SAE fittings. In the event no material is specified, Viton will be supplied. Buna (21) is standard for other fittings with O-rings. Alternative O-ring materials are available, including silicone (01), and Buna-N (23). Example **6CMS631623**

# Thread Connections Available with GYROLOK® Fittings

## Pipe Thread Information

GYROLOK® tube fittings are available with NPT (National Pipe Taper), BSP/ISO (British Standard Pipe/International Standards Organization), SAE or unified screw threads.

### Tapered Threads

Specifications	Type	Part Number or Suffix Designation	Sealing Method
NPT	M/F	Fitting type ends in M or F, as in CM or CF	Seal is made on the thread. Thread sealant is required.
RT to ISO 7/1 • BS 21 • JIS B0203 • DIN 2999	M/F	Modifier is C, following the unit of measure for fractional (E) or metric (M), as in 6CM4316EC	Seal is made on the thread. Thread sealant is required. The BSP/ISO thread utilizes a different angle and the number of threads per inch may differ from NPT. Reference DIN 3852, Form C.
	M/F		
	M/F		
	Male		

### Straight and Parallel Threads

Specifications	Type	Part Number or Suffix Designation	Sealing Method
American Standard unified screw threads	Male	Fitting type ends in S, as in COS or AOS.	Generally utilizes an elastomer O-ring to provide sealing.
RP to ISO 228/1 • BS 2779 • JIS B0202	Male	Modifier is B, following the unit of measure for fractional (E) or metric (M), as in 6CM4316EB	Metal to metal sealing to DIN 3852, Form B.**
RS to ISO 228/1 • BS 2779 • JIS B0202	Male	Modifier is A, following the unit of measure for fractional (E) or metric (M), as in 6CM4316EA	Utilizes a sealing washer to provide sealing. Reference DIN 3852, Form A.**
RG to ISO 228/1 • BS 2779 • JIS B0202	Female	Modifier is Z, following the unit of measure for fraction (E) or metric (M), as in 6CF4316EZ	Sealing form meets DIN 16288, Form Z.

\*\* Female RP or RS end available with Form X.

## GYROLOK® Fittings with SAE Ends

### SAE Straight Thread O-Ring Seal Fittings

GYROLOK®'s SAE Straight Thread O-Ring Seal Fittings are designed and manufactured to SAE standards defined below for use in many different applications including hydraulics and natural gas vehicles. HOKE's SAE Straight Thread O-Ring Fittings are supplied with Viton O-rings.

Fittings available include: Tube to SAE straight connectors, positionable SAE elbows and tees, and SAE reducers.

### Thread and O-ring Sizes in inches

Nominal Tube O.D.	Port Size	Thread Size	O-ring Size #
1/8	2	5/16 - 24	902
1/4	4	7/16 - 20	904
3/8	6	9/16 - 18	906
1/2	8	3/4 - 16	908
5/8	10	7/8 - 14	910
3/4	12	1 1/16 - 12	912
1	16	1 5/16 - 12	916

### SAE Specifications

HOKE's SAE Straight Thread O-Ring Seal Fittings are designed and manufactured to meet SAE Standards as follows:

- Male or External Fitting End Dimensions: SAE J514
- Straight Threads: SAE J475 (equivalent to ANSI B1.1 or ISO R725)
- Female or Internal Straight Thread Boss: SAE J1926 (see diagram below)

### Installation Instructions

#### Positionable End Connections

1. Assure that the locknut is fully raised.
2. Turn the external SAE end clockwise into the internal boss until the metal washer is in contact with the boss.
3. Orient the GYROLOK® end to the proper direction by now turning the fitting *counterclockwise* up to a *maximum* of 1 turn.
4. While supporting the body wrench pad with a backup wrench, tighten the locknut until the washer is snug against the face of the boss.

GYROLOK® Assembly Instructions, see page 58.

## O-ring Installation Instructions

GYROLOK® O-ring seal fittings are used for direct connection to existing pipe thread or straight thread ports—which have a smooth, flat surface perpendicular to the threaded port. O-ring seal fittings provide leak-tight sealing on both vacuum and high pressure systems. In the pipe thread version, a special short thread insures against thread interference.

The standard Buna N O-ring is completely contained in a precision groove, to prevent O-ring extrusion at high pressure. The precision groove also provides a controlled squeeze for a vacuum-tight seal.

The chart lists pertinent dimensions useful with O-ring seal connectors and adapters.

**Note:** When installing an O-ring port:

1. Hand-thread until the O-ring compresses on the port end.
2. Snug the fitting to the port with a wrench to completely compress the O-ring.
3. Always use a back-up wrench to hold the O-ring seal fitting body, when connecting or disconnecting a GYROLOK® end.

To specify O-ring material, see page 10.

RG female thread ends require a gasket inserted into the flat bottom of the thread. The male end, when assembled, exerts pressure on the gasket, creating a seal.

#### Reducing Assemblies Made With GYROLOK® Fittings

Use the GYROLOK® Reducer to reduce the size of an existing fitting, there by providing more flexibility in a variety of installations. It comes with a GYROLOK® fitting on one end and a machined tube stub on the other.

\* [ ] see page 9 for material specifications.

The CMT body does not contain a sizing angle or butt seal. As a result, the thermocouple can be extended beyond the fitting's NPT thread end.

Example: GYROLOK® CMT assembled to thermocouple.

#### Assembly Instruction:

Because the thermocouple is not bottomed out within the fitting body, follow these simple steps before carrying out GYROLOK® assembly instructions on page 58.

1. Position the length of the thermocouple to extend past the fitting's NPT end.
2. Once correctly positioned, carefully hold thermocouple in place to prevent shifting during assembly

### Heat Exchanger Tee Made With GYROLOK® Tube Fittings

Heat exchanger tees made with GYROLOK® tube fittings can provide additional flexibility as well as reduce costly fitting inventories.

**Ordering Instructions**

Heat Exchanger Tees can be created with standard union tees and full port reducers to allow process tubing to be inserted into and through the jacket tubing.

To order a full port reducer, add the letter “T” to the core reducer part number.

**Example: 8RT12316**

### Eliminate Alignment Problems—Use Adapters

Female Pipe Port

**Example:** Need to join tubing and a female NPT port at 90° angle to one another.

Male Elbow

**Problem:** With the NPT end properly torqued, the tube fitting end of a male elbow may not properly line up with the tubing.

Male Adapter

**Solution:** Use a male adapter and union elbow. Tighten pipe thread of male adapter to convert the female port into a tube stub end.

Union Elbow

**Assembly:**  
1. To connect union elbow to adapter, hold elbow pointing in desired direction and follow standard GYROLOK® assembly Instructions on page 58.

2. Insert tubing into other end of the union elbow and properly connect tubing.

## Union Tee Plus Adapter Assemblies Help Eliminate Costly Inventory

The GYROLOK® Female Adapter converts a male pipe thread to a tube stub end so that any GYROLOK® tube fitting of proper size can be connected. It comes with a female pipe thread on one end and a machined tube stub on the other. By using adapters with union tees, you'll need fewer male or female branch tees and run tees.

RG female thread ends require a gasket inserted into the bottom of the port. The male end, when assembled, exerts pressure on the gasket, creating a seal.

### Screen: SCR N

GYROLOK®		
4SCRN316	1/4	0.05
6SCRN316	3/8	0.05

Use to prevent insects from entering open vent lines.

#### Usage Instructions:

1. Substitute screen for rear ferrule in an open GYROLOK®-ended line. (No tubing connected.)
2. Finger-tighten nut.

GYROLOK® Fittings are available with knurled nuts and nylon ferrules for use with polyethylene tubing. Hand-tightening allows for quick, easy assembly and disassembly, while providing a leak-tight seal, ideally suited for laboratory hookups. Use such fittings with glass and other hard wall tubing materials.

To order, simply add **KNN** to the basic part number. Example: **4CM4** with a knurled nut and nylon ferrules would be **4CM4KNN**.

### Safety Changer Nut & Ferrule Sets: SCNF

Each **SCNF** contains 5 nut and ferrule sets. A nut and ferrule set consists of 1 nut, 1 front ferrule and 1 rear ferrule.

Provides a safe, easy, correct way to reuse existing fittings and valves with new GYROLOK® components. Color coding differentiates metric and fractional parts and materials.

## Tube Inserts

GYROLOK® tube fittings may be used with various types of plastic tube material without any special preparation. Use tube inserts to support soft types of tubing, such as Tygon or polyvinyl chloride, prior to insertion into a GYROLOK® end. See chart at right for recommendations.

### Usage Instructions

1. Fully insert Tube Insert into plastic tubing, where appropriate.
2. If using standard nut, follow standard GYROLOK® assembly instructions, page 58 Manual Assembly Instructions.
3. For finger-tight assembly, standard Brass fittings are available with knurled nuts and nylon ferrules.

# GYROLOK® Calibration Fittings

GYROLOK® Calibration Fittings save time and money by reducing the time required to calibrate differential pressure transmitters. HOKE's calibration fittings, constructed of 316 Stainless Steel, combine a straight thread and conical metal-to-metal sealing surface on one end with a 1/4" GYROLOK® tube fitting on the other. This design allows the technician to easily calibrate the transmitter – in place – without removing the pipe plug/bleed port tap assemblies. No PTFE tape is required. GYROLOK®'s exclusive Controlled Ferrule Drive increases value – extending cycle life.

## Features

Straight Thread/Metal-to-Metal Sealing:

Controlled Ferrule Drive:

Butt Seal:

Sizing Angle:

Nut and Ferrule Safety Changer:

## Benefits

- Ease of installation
- Greatly extends remake life
- Protects tubing from overstressing
- Maximizes seal integrity and user safety
- Reduces tube sticking
- Safe, simple component replacement

The Lapped Flange Connector is used to allow safe and easy connections between process lines and instruments. The basic, one-piece unit consists of a GYROLOK® tube connection end and a 1/2" lap joint pipe flange. The flange end is dimensioned to meet "ANSI 2500" flange specifications. Available in "Smooth" or "Serrated/Concentric" seal faces, and in 316 Stainless Steel or MONEL®.

# HOKE® Dielectric Tube Fittings

The GYROLOK® Dielectric Tube Fittings are for use in applications where electrical current flowing through a pipe or tube line must be interrupted to protect vital instrumentation and metering equipment.

## Features

- Thermoplastic Insulators with:
- Resistance in excess of  $10^8$  ohms at 70° F (21° C) and 50% relative humidity.
  - Resistance in excess of  $10^6$  ohms at 100° F (38° C) and 90% relative humidity.

Metal components made of 316 Stainless Steel:

Appropriate orifice for fitting size (e.g. .358" orifice in 1/2" fitting):

GYROLOK® tube fitting ends:

## Benefits

- Maximum safety and protection to critical monitoring station instrumentation.
- Long component life in rugged environment.
- Maximum flow capability provided by all sizes of GYROLOK® Dielectric tube fittings.
- The unique value and performance offered by GYROLOK®.

## Technical Data

- Body Construction Materials: • 316 Stainless Steel
- Insulator: • Molded Thermoplastic
- O-ring Material: • 90 Durometer Viton
- Back-up Washer: • PTFE

- Electrical Resistance of Insulators: •  $7.0 \times 10^8 \Omega$  @ 10 Volts DC @ 70° F and 50% relative humidity  
 •  $1.0 \times 10^6 \Omega$  @ 10 Volts DC @ 100° F and 90% relative humidity
- Pressure Rating: • 5000 PSIG @ 70° F (34,470kPa @ 21° C)
- Temperature Rating: • -40° F to +200° F (-40° C to +93° C)

## Design

The Dielectric Tube Fitting must perform three primary functions:

1. Electrical insulation
2. Reliable fluid containment
3. Appropriate flow for line size

In the HOKE® design, the insulation function is performed by thermoplastic insulators which provide performance unequalled by any similar product.

A Viton O-ring and PTFE back up ring provide the containment function within the fitting. GYROLOK®'s 2-ferrule system provides sealing with the impulse line tubing.

Appropriate flow for line size is achieved by providing the appropriate inside diameter for tubing size. See "E" dimensions in Dimensional Table.

**WARNING: A "NO WRENCHING" label is placed on the hex of the nut in the insulation sections. Do not disconnect the labeled nut or allow this section to be torqued without proper backup. NPT connections (where applicable) must be installed prior to final tube connections.**

## Application

Commonly used in the Natural Gas Transmission industry, the Dielectric Fitting will prevent current flow resulting from Impressed Current Cathodic Protection Systems, static electricity or even lightning strikes, from reaching sensitive monitoring station equipment.

Impressed Current Cathodic Protection Systems involve the application of a low voltage, low amperage direct current to a pipeline and eventual transfer of corrosive effects to a typically underground anode bed.

If the current flow is not interrupted before reaching the monitoring station critical equipment could be damaged or rendered inaccurate.

By installing GYROLOK®'s Dielectric Tube Fitting on impulse lines between the pipeline and the monitoring station, current flow is interrupted while full fluid flow is permitted.

## HOKE® Chromatography Fittings

GYROLOK® tube fittings for use in gas or liquid chromatography applications are available in a variety of user-required configurations. HOKE's Chromatography Fittings feature low dead volumes, male nut designs, as well as configurations utilizing either press-fit or drop-in frits. For user convenience, both frit versions are available in a number of micron sizes. By combining the needs of the Chromatography Fitting with key GYROLOK® features, such as controlled ferrule drive, the GYROLOK® Chromatography Fitting offers capabilities and performance that are unmatched in the industry.

### Pressure Ratings

GYROLOK® Chromatography fittings are rated for working pressures higher than the tubing recommended for use. Refer to HOKE's Tubing Data Charts for specific information. (Contact factory for current version)

### Temperature Ratings

316 Stainless Steel: -325° F to +800° F (-200° C to +425° C)

Note: Intermittent use to 1200° F is possible, however prolonged exposure to temperatures over 800° F is not recommended.

### Features

Low Dead Volume:

Press-fit or Drop-in Frits:

Conical Diffusion Angle:

Male Nut Configuration:

Fritless Configurations:

Controlled Ferrule Drive:

Interchangeability:

### Benefits

- Accurate analysis and measurement
- Filter elements can be ordered factory installed (press-fit) or for field installation (drop-in)
- 4 micron sizes are offered as standard, other sizes can be provided
- Perform final filtering function for low volume fluids
- Press-fit frit design reduces internal volume
- Assures fluid contact over a greater surface, extending frit life while reducing unfiltered volume
- Reduced internal volume
- For use with G.C. columns or L.C.'s with screens
- Long product life with outstanding remakeability
- Fittings are interchangeable with those of certain other manufacturers (consult factory)

## GYROLOK® Marking Tool

Tube fitting users have long recognized that proper tube and tube fitting system function requires good tubing preparation followed by the use of correct installation procedures. Improper ferrule set in any flareless tube and fitting system may be the result of burrs created during the tube cutting process, improper tube insertion into the fitting, or inadequate tightening of the fitting nut. In order to maximize tube and fitting system performance and safety, HOKE® offers several tool options combined with detailed installer training. The GYROLOK® Marking Tool provides the installer with an economical means of ensuring both proper tubing insertion into the fitting and adequate nut tightening.

Standard GMT

Three-In-One GMT  
(468GMT and 61012-GMTMM)

### Usage Instructions

1. Squarely cut tubing, preferably with a tube cutter, and then deburr both inside and outside diameters as necessary.
2. Firmly insert tubing into the tool as far as possible.
3. Mark the tubing, as shown, with a Sharpie Ultrafine Point model 37001 marker. Take care to position perpendicular to the tool as shown for correct marking position.
4. Firmly insert the marked tubing into the GYROLOK® fitting to which it will be assembled. Finger-tighten the nut if below 12MM, tube tight if 12MM and above. As viewed from the side, the mark should NOT be visible at this point. If not visible, continue to step 5. If any part of the mark is visible above the GYROLOK® nut after finger-tightening below 12MM, tube tight if 12MM and above, the tubing is either not properly seated within the fitting or a ferrule is missing. Disassemble and determine cause.
5. If the mark is not visible after finger-tightening, continue by following appropriate GYROLOK® assembly instructions for tubing O.D. and wall thickness.

25PSTMM	25	63.5	37.9

### Usage Instructions

1. Place PST in vice.
2. Loosely assemble nut and ferrules to PST. Use GYROLOK® Safety Changer Nut & Ferrule Sets.
3. Follow standard GYROLOK® assembly instructions to set ferrules onto tubing, see page 58.
4. Loosen nut and remove tubing with pre-set ferrules and nut.
5. With pre-set ferrules and nut in permanent location, reassemble tubing by following GYROLOK® reassembly instructions on page 58.

Note: Threads of pre-setting tools should be lubricated the very first time and relubricated every tenth time thereafter.

## Leak Detectives Products

HOKE's Leak Detectives products are used to detect leaks in pressurized gas systems. Use the Leak Detective to locate fugitive gas emissions in compressed air, oxygen, helium, hydrogen, nitrogen, natural gas, acetylene, and propane systems.

The Leak Detective is manufactured to meet specification MIL-L-25567D and is available in two types. Type 1 is for regular temperature applications 27° F to 200° F (-3° C to 95° C) while Type 2 is for colder application from -65° F to 200° F (-55° C to 95° C). The Leak Detective is packaged as standard in 8 ounce (230 ml) bottles or 1 gallon (4 liter) containers. A tracer tube is provided with each small bottle. 5 gallon containers and 55 gallon drums can also be provided upon request.

### Packaging

## Benefits

- Safety:**
- Oxygen compatible and manufactured in accordance with MIL-L-25567D
  - Meets requirements of ASME Section V for composition and purity
- Certifications:**
- Material Safety Data Sheets (MSDS) available
- Helps eliminate fugitive emissions:**
- Verifies leak-tight systems
- Cleanliness:**
- Leaves virtually no residue

## Technical Data

### Specification

- Complies with MIL-L-25567D

## Hydraulic Pre-Setting Tool (HPST)

Larger tube fittings often require more effort to assemble properly than can be consistently achieved using hand wrenches. HOKE® offers a portable Hydraulic Pre-setting Tool to make the assembly of larger fittings:

- **Safer.** The Hydraulic Pre-setting Tool helps assure consistently correct assembly of larger fittings.
- **Simpler.** Interchangeable die sets allow easy conversion from one tube and fitting size to another.
- **More cost-efficient.** Using the Hydraulic Pre-setting Tool extends fitting life and reduces assembly time.

Using the portable Hydraulic Pre-setting Tool, the GYROLOK® nut and ferrule system is initially set onto the tubing. The pre-set fitting and tube assembly is then easily installed by following the GYROLOK® reassembly instructions.

Features	Benefits
One basic pre-setting head for all sizes:	• Provides versatility and value by covering sizes from ½” through 2” and 12mm through 50mm.
Interchangeable die sets:	• Allows easy conversion from one tube and fitting size to another.
10,000 PSI hydraulic pump:	• Provides the force necessary for consistent, fast, and simple fitting assembly.
Carrying case:	• Rugged steel carrying case offers easy transportation as well as a single storage location for all tool components.

### How It Works

GYROLOK® nut and ferrule system components are assembled onto Hydraulic Pre-Setting Tool. Hand pump is operated until indicator arm releases.

Pre-set tube assembly is ready for installation per HOKE's published instructions.

### How to Order

**HOKE's Hydraulic Pre-Setting Tool, Pump and Ram Assembly.** Carrying case is included. Carrying case has room for 6 die sets.

Order Part# **3HPST**, which includes:

- 3HPST assembly (see above picture)
- Grey indicator nut (use for 5/8” (14mm) thru 2” (38 mm) fittings)
- Black indicator nut (use for 1/2” (12mm) fittings ONLY)
- Black Case
- Enerpac Pump
- Die-Fixing bolt
- 5mm Allen Wrench
- Adjusting wrenches

**Die Sets** - Consists of one die and one jig for an individual tube size.

# GYROLOK® RS Bonded Seals

## RS Bonded Seals

RS bonded gaskets create a seal with DIN 3852, Type A (RS) parallel threads. Gasket outer rings are available in both 316 stainless steel and zinc plated carbon steel. The inner ring, bonded to the outer ring, consists of either Buna-N or fluorocarbon FKM. To order, specify pipe size, outer ring, and inner ring material.

*Note: For use only with GYROLOK® RS fittings*

## Manual Assembly Instructions

Use of a PST (Manual Pre Setting Tool) is **recommended**. GYROLOK® Marking Tool (GMT) is **strongly recommended**.

Fully insert a correctly cut, deburred tube into the PST or fitting body until the tube rests on the sizing angle.

Holding the tube in the PST or Body, extract the nut and ferrules to visually ensure both ferrules are correctly oriented.

Once correct ferrule orientation is confirmed, thread & rotate the nut onto the PST or Body until hand-tight. The GMT witness line should **NOT** be visible.

Establish a reference point for wrench tightening by marking both the fitting body and nut.

While supporting the PST or fitting body, tighten the nut with a wrench 1 1/4 turns. The pre-set or make-up is now complete. Confirm that the GMT witness line is now visible.

## GYROLOK® MARKING TOOL (GMT) INSTRUCTIONS

Insert the correctly cut and deburred tube into the GMT as far as possible.

Mark the tubing as shown with an Ultra-Fine Point, Chloride-Free pen (recommended Sharpie Model 37001). Take care to position the marker perpendicular to the GMT, or insufficient ferrule set could occur.

## HPST Assembly Instructions

GYROLOK® Marking Tool (GMT) is **strongly recommended**.

**Ensure the HPST Tooling Set is installed with the proper indicator nut.**

Fully insert a correctly cut, deburred tube into the HPST head. Visually ensure both ferrules are correctly oriented. Thread & rotate the nut until hand-tight.

Set the indicator arm in the operating position by rotating the Indicator Nut counter-clockwise until it stops.

Pump the handle until the indicator arm releases.

**CAUTION:** Stop pumping immediately after the arm releases, as over-pumping may cause the tube to swell and stick. Pre-setting is now complete.

Insert the end with pre-set ferrules and nut into the fitting. Thread and rotate the nut until hand-tight. While supporting the fitting body, tighten the nut with a wrench 1/2 turn for tubing up to 1" (25mm). For tubing greater than 1" (25mm) 3/4 turn is required. The initial fitting make-up is now complete.

## REMAKE INSTRUCTIONS

Firmly insert end with the correctly set ferrules & nut into the fitting. Thread & rotate the nut until hand-tight. The GMT witness line should **NOT** be visible.

While supporting the fitting body, tighten the nut with a wrench 1/4 turn.

**PLUGS & PORT CONNECTORS**

Remove and discard ferrules. Firmly insert the plug or port connector into the end connection and hand-tighten the nut.

While supporting the fitting body, tighten the nut with a wrench ¼ turn.

**TUBE ADAPTERS & REDUCERS**

For this type of fitting please follow the Manual Assembly Instructions.

**MALE NUT (INTEGRAL) PST INSTRUCTIONS**

For this type of fitting please follow the Manual Assembly Instructions. After PST is used, assemble fitting to body and follow standard Remake Instructions.

# Integral GYROLOK® Assembly Instructions (1/2" and below)

## MANUAL ASSEMBLY INSTRUCTIONS

1

**Fig. 1**

Fully insert the tube into the manifold body.

2

**Fig. 2**

Holding the tube in place, loosen the nut until it can be pulled over the tube. Extract the ferrules from the manifold body to ensure the front and rear ferrules are in the correct orientation (see Fig. 2). Once correct ferrule orientation is confirmed, slide the nut into place and finger tighten the nut.

3

**Fig. 3**

Make sure the nut is finger-tight and then establish a consistent point for the wrench tightening by marking the tube and nut.

4

**Fig. 4**

With the manifold supported use a wrench to turn the nut 1-1/4 turns, clockwise, from the finger-tight position. When finished, the mark line on the nut should be 90 degrees clockwise from the marked line on the tubing. Assembly is complete.

## REMAKE INSTRUCTIONS

1

Insert the tube with the nut and ferrule assembly attached. Tighten the nut finger-tight.

2

With the manifold supported use a wrench to turn the nut clockwise until there is a sudden rise in torque and then make an additional 1/8 of a turn.

We Care About Your Safety

### WARNING

*Improper selection or use of products described herein can cause Personal injury or property damage*

Product information described herein is offered for use by the system designer and user.

It is solely the responsibility of the system designer and user to select products suitable for their specific application requirements and to ensure proper installation, operation and maintenance of these products. Material compatibility, product ratings, and application details should be considered in the selection.

Always contact your local HOKE® Distributor with any questions you may have before pressurizing and operating the product.

## Safety Instructions

1. Do not tighten or loosen any part of a fitting or valve when the system is pressurized. Make sure the system is un-pressurized when tightening or loosening a fitting or valve connection.
2. Do not loosen GYROLOK® nut or any product component in order to relieve or bleed down system pressure.
3. Do not exceed pressure-temperature specifications stated in the appropriate catalog.
4. When the application involves use of a toxic or hazardous fluid, exercise extra caution during operation and maintenance.
5. Before assembling new, unused GYROLOK® tube fitting ends, loosen the GYROLOK® nut before inserting the tube to allow full insertion of the tube to the base of the body bore.
6. Always use tubing that is compatible with the fitting or valve material. Tubing appropriate for use with HOKE® products is described in Tubing Data Charts. For example, use 316 Stainless Steel fittings with 316 Stainless Steel tubing.
7. Always leave a length of straight tube between the tube bend and the fitting. A tube bent too close to the fitting connection may be a source of leakage.
8. During assembly of the GYROLOK® tube end, always hold the fitting or valve body with one wrench while separately wrench tightening the GYROLOK® nut. Follow the same precaution when disassembling.
9. Always use a HOKE® tube insert (basic part number "TI") when assembling a GYROLOK® fitting to soft, pilable plastic tubing.
10. Always use proper thread lubricants or sealants on tapered pipe threads. Note that thread sealants may have lower temperature ratings than the basic fitting.
11. When installing an NPT ended valve, hold the valve body near the connection with one wrench, while separately wrench tightening the mating pipe. Turn the pipe, not the valve. Follow the same precaution when disconnecting.
12. Do not hold the valve handle when tightening an end connection.
13. Do not use excessive force to open or close a ball valve e.g. do not use a handle extension.
14. On initial installation, valves may require an adjustment of the packing nut due to storage variations, systems parameters, and cold flow properties of TFE.
